50.001N(-2) | Crystal Clear

TOTAL GLASS | Clear Printable Media

ABOUT

Crystal Clear is a transparent print film designed to produce window graphics. This 75 micron polymeric PVC with an ultra-clear adhesive allows the film to be almost invisible when applied. The high gloss surface of the film adds depth and vibrancy to the print. Due to its excellent UV blocking properties, Crystal Clear can also be used as a protective lamination film for perforated window film graphics. Crystal clear is available with either a permanent (50.001N) or a removable adhesive system (50.001N-2). The removable adhesive ensures easy removal without any adhesive residue up to one year after application.

Typical applications:
Printed window graphics for retail stores, supermarkets, hospitals, nurseries, offices, home environment, events,...
Also: lamination film for one-way vision graphics.

FEATURES

- √ STUNNING PRINT RESULTS
